

FIRE AWARENESS/FIRE EXTINGUISHER TRAINING

Course Overview

Apart from the fact that it is a legal requirement under the health & safety regulations that fire safety training is provided to all employees, it has also been proven time and time again that a well-trained workforce not only reduces the risk of fire, but in the event of one, will respond quickly and effectively to minimise the damage.

Each course is tailored to suit the needs of the company in which it is held, and all courses are tutored by suitably trained fire trainers.

Each year the correct use of fire extinguishers saves New Zealand businesses millions, preserves lives and prevents injury. Small fires can spread rapidly and trained staff can help to prevent the escalation of minor fires.

Fire Fighting Pacific use experienced fire training professionals who provide an exciting training experience using the latest equipment and focusing on the teaching of realistic fire management techniques. The delegates will be taught the correct selection and use of fire extinguishers via a practical demonstration where delegates will use extinguishers in real fire situations.

Is it safe & clean?

The "Live Fire" component uses an electronically controlled fire, simulating A, B, or C class fires, and provides a clean, environmentally friendly, and extremely safe training platform. There is no Dry Powder mess to clean up, no dangerous fuel burning, no smoke and no additional CO2 emissions. For ultimate safety, the trainer operates the fire with a "Deadman" switch to extinguish the fire immediately.

Who is it for?

This course is suitable for all employees (particularly new employees) who may need to use a fire extinguisher in an emergency and who require fire awareness training as part of an employees responsibilities.

Topics Covered
